Kanadevia Group Wins the FY2026 Engineering Contribution Award Dubai Waste-to-Energy Plant Project Team Recognized for International Contribution

Kanadevia Corporation and its wholly owned subsidiary Kanadevia Inova AG (Switzerland, hereinafter “Inova”) are pleased to announce that their joint project team responsible for the construction of a Waste-to-Energy (WtE) plant in the Emirate of Dubai, United Arab Emirates, has received the “International Contribution” award category of the FY2026 Engineering Contribution Awards presented by the Engineering Advancement Association of Japan.

【Dubai Waste-to-Energy Plant completed in 2024】

The Engineering Contribution Awards, established in 1981, recognize individuals and groups that have made outstanding contributions to the advancement of the engineering industry. Awards are presented in several categories, including international contribution through engineering activities overseas, technological advancement, and environmental contribution.

The Dubai WtE plant is one of the largest facilities of its kind in the world, with an annual waste processing capacity of 1.9 million tonnes and power generation capacity of approximately 200 MW. It is also the first full-scale WtE plant in the Emirate of Dubai, where landfill disposal had previously been the dominant waste treatment method. More than 430 members from Kanadevia and Inova participated in the project team. Despite the fact that most of the construction period coincided with the COVID-19 pandemic, the facility was successfully completed in August 2024 without delay.

As a member of the project company, Inova has also invested in the project. In addition to designing key plant equipment such as waste cranes and grates, Inova has jointly undertaken the operation and maintenance of the facility for 35 years together with the BESIX Group, a leading Belgian construction company. Through these activities, Inova continues to contribute to the promotion of clean energy utilization in the Emirate of Dubai.

The Kanadevia Group has achieved world-class results in WtE projects, with extensive experience in Japan and Europe and increasing project awards in the Middle East in recent years. Leveraging its long-established engineering expertise, the Group will continue contributing to the resolution of social challenges and the realization of a sustainable society around the world.
